使用说明&测试

1.

```
newAviation 注册航空公司编号 1, 昵称 anewBank 注册银行编号 2, 昵称 bnewPetroleum 注册石油公司编号 3, 昵称 pnewMarket 注册超市编号 4, 昵称 mnewCommdity 注册一个奖品编号 5, 昵称 comnewClient 注册客户 c1编号 6, 昵称 c1, 积分数组 [10, 10, 10, 10], 钱: 10newClient 注册客户 c2编号 7, 昵称 c2, 积分数组 [10, 10, 10, 10], 钱: 10
```

```
> dp. newAviation. call("1", "a", 100)
[true, "success"]
> dp. newBank. call("2", "b", 100)
[true, "success"]
> dp. newPetroleum. call("3", "p", 100)
[true, "success"]
> dp. newMarket. call("4", "m", 100)
[true, "success"]
> dp. newCommodity. call("5", "com", 15)
[true, "success"]
> dp. newClient. call("6", "c1", [10, 10, 10, 10], 10)
[true, "success"]
> dp. newClient. call("7", "c2", [10, 10, 10, 10], 10)
[true, "success"]
```

2. Queryclientbalance

显示查询客户 c1 的积分数组和钱款 (积分分别对应四个公司的积分) [10, 10, 10, 10], 10

```
> dp.Queryclientbalance.call("6")
[true, "Success", "c1", "[10,10,10,10]", 10]
```

显示查询客户 c2 的积分数组和钱款(积分分别对应四个公司的积分) [10, 10, 10, 10], 10

```
> dp.Queryclientbalance.call("7")
[true, "Success", "c2", "[10,10,10,10]", 10]
```

3. exchangepoints

客户 c1 和 c2 交换积分

航空公司积分: c1少2, c2多2;

银行积分: c1 多 2, c2 少 2

```
> dp. exchangepoints. call("6", 2, 1, "7", 2, 2)
[true, "success"]
> dp. Queryclientbalance. call("6")_
[true, "Success", "c1", "[8, 12, 10, 10]", 10]

> dp. Queryclientbalance. call("7")
[true, "Success", "c2", "[12, 8, 10, 10]", 10]
[12, 8, 10, 10], 10
```

4. exchangMoneyToPoints

客户 c2 在航空公司消费,钱款变少,转换成相应积分

```
> dp. exchangeMoneyToPoints. call_("7", 8, 1)
[true, "success"]
> dp. Queryclientbalance. call("7")
[true, "Success", "c2", "[20, 8, 10, 10]", 2]c2:[20, 8, 10, 10], 2
```

5. pointstransaction

客户 c2 用航空公司的积分换取奖品,消耗 15 积分

```
> dp. pointstransaction. call("7", 1, "5")
[true, "Purchase succeeded"]
> dp. Queryclientbalance. call("7")
[true, "Success", "c2", "[5, 8, 10, 10]", 2]
c2: [5, 8, 10, 10], 2
```

Ps: 后台保持挖矿状态以完成交易
